The unified SRE platform. Incidents, on-call, observability, and AI agents — on one stack, one bill, one UX.

What we do

SREonCall replaces the duct-taped stack of PagerDuty + Datadog + OpsGenie + runbook wikis with a single multi-tenant platform that ingests metrics, logs, and traces, correlates them with incidents, and lets AI agents resolve the boring parts automatically.

Who it's for

- **Growth-stage SaaS** drowning in Datadog bills and looking to consolidate.
- **MSPs** managing 10-500 customer tenants who need per-tenant isolation, cross-tenant visibility, and a control plane.
- **Regulated on-prem shops** (finance, healthcare, public sector) that need everything the cloud vendors offer, inside their VPC.

The six pillars

PILLAR	WHAT IT DOES
Incidents	PagerDuty-style on-call, escalations, runbooks, post-mortems
Observability	Managed LGTM stack (Mimir, Loki, Tempo) with per-tenant quotas
Synthetic checks	HTTP, TCP, DNS, ICMP probes from global edge
AI agents	Claude-powered triage, runbook execution, on-call assistance
Status pages	Branded public status pages with subscriber notifications
Provider map	MSP-only cross-tenant dashboards and bridge integrations

Pricing at a glance

PLAN	STARTS AT	SEATS	FOR
Startup	\$49/mo	5	Small teams just starting with on-call
Growth	\$249/mo	15	Established SaaS replacing PD + DD
Enterprise	Custom	Unlimited	SLA, SSO, audit, custom regions
Self-hosted	Custom	Unlimited	VPC-deployed or on-prem

Why partners win

- **15% Y1 / 7.5% Y2+** referral rate on ARR — paid quarterly, 30 days after close.
- **35/30/25** taper on reseller margin — you invoice, we deliver.

- **40% flat** platform share for MSPs, plus **80%** on managed services.
- Deal protection for 120 days from registration. Partner portal tracks every deal, breakdown, and payout in real time.

Why customers win

- **40-60% TCO reduction** versus Datadog + PagerDuty.
- **One vendor, one bill** — simplified procurement and one contract.
- **AI agents that do work**, not just chatbots that answer questions.
- **Open-source core** — no vendor lock-in, open query language, exportable data.
